*The Connective “czy” in Polish Language*

In Polish, the word “czy” is most frequently viewed as an interrogative particle (it has a similar function to the English word “whether” but only in indirect questions) as well as a connective (equivalent to “or” in English).

I’m interested in the connective function of the word “czy”. In my article I look for an answer to the question whether the word “czy” viewed as a connective can be an equivalent to one of the functors in logic (if so, to which one?).

Keywords:

connective, the “czy” connective, exclusive disjunction, non-exclusive disjunction
